Corey Patient — White Label Flow

One App Store app customizes look and feel per hospital/facility. Users select an organisation on first launch; the choice is saved and applied to login wallpaper, navbar, and dashboard accents. Users can change organisation from login or Profile & Settings.

- First launch → Select Organisation → fetch OrgTheme → branded login.
- Next launches → skip selection → login with saved Organisation A branding.
- Change organisation → sign out → select new facility → new theme.

User flow diagram

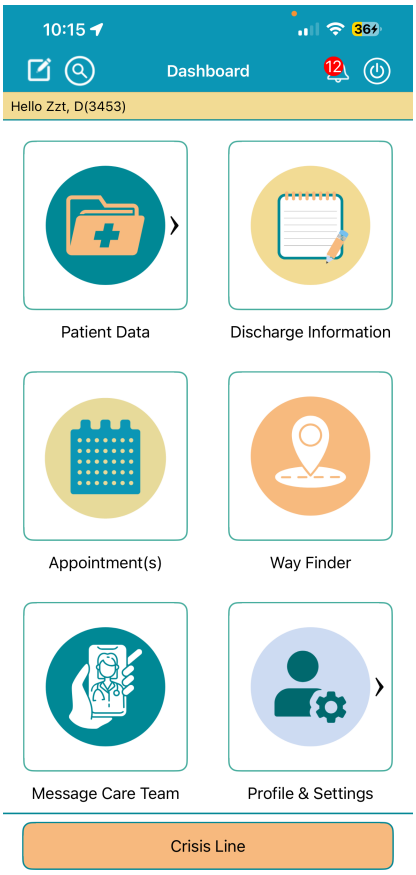

Current App Store reference

Existing login (organisation in third field — to be moved to org selection step).

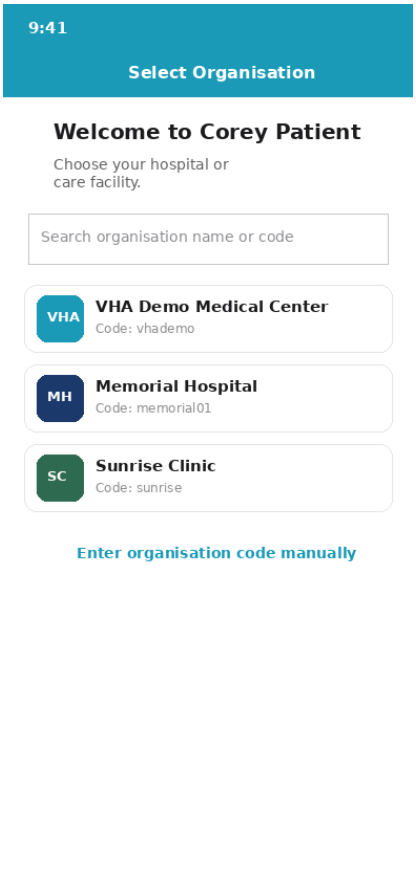

Existing dashboard (teal navbar and accent palette).

Proposed white-label screens

Screen 1 — Select Organisation (first launch).

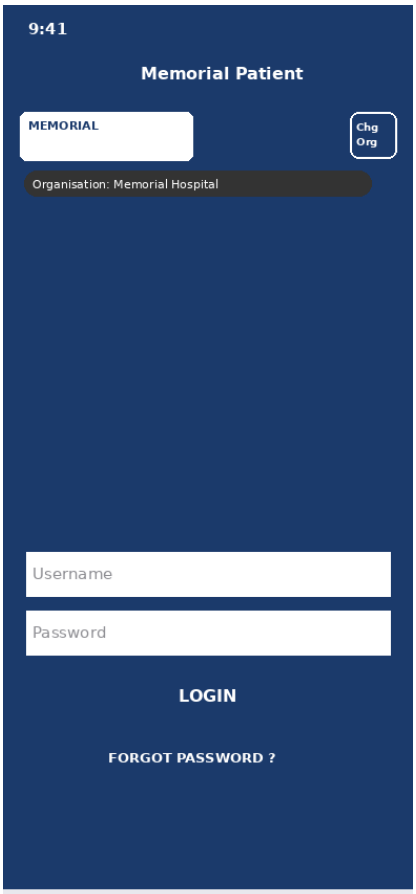

Screen 1 — First launch: Select Organisation

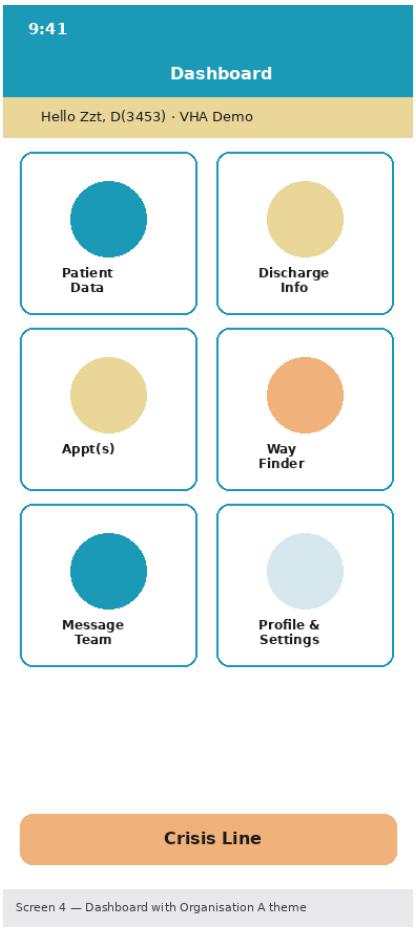

Screen 2 — Login branded for Organisation A (VHA Demo, teal).

Screen 3 — Login branded for Organisation B (Memorial, navy).

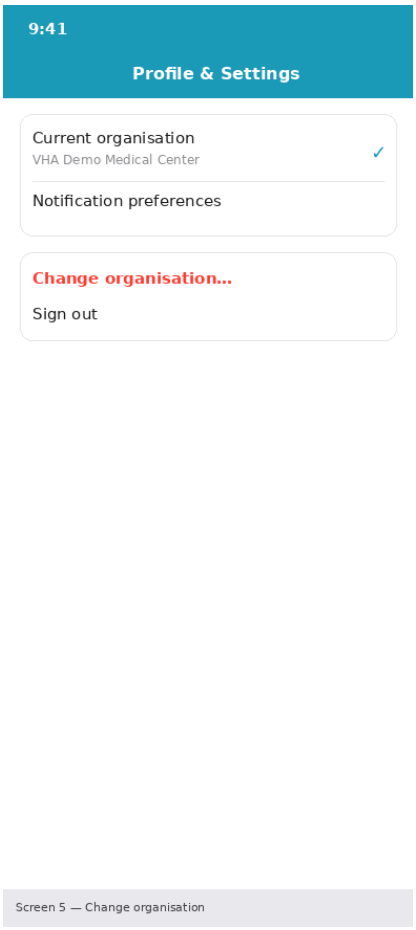

Screen 4 — Dashboard with organisation name and theme tokens.

Screen 4 — Dashboard with Organisation A theme

Screen 5 — Change organisation from Profile & Settings.

Screen 5 — Change organisation

OrgTheme configuration (implementation)

primaryColor → navbar, buttons, borders; secondaryColor → greeting bar; accentColor → crisis button and highlights; loginWallpaperUrl and logoUrl → login hero; appBarTitle → navigation title. Persist selectedOrgId and cached theme in Keychain; refresh theme on TTL or app upgrade.
